

Phase 1 - Sensor Hardware Deployment

Pilot: IoT Sensor Network for Rural Water Quality Monitoring | Submission reference: M-001

Submission summary

Twenty-five solar-powered monitoring nodes were installed and commissioned across designated pilot villages in the Konkan region. All locations completed connectivity and baseline water-quality tests.

Verification item	Recorded result
Deployment coverage	25 of 25 field nodes installed and reporting
Power verification	Solar charge controller and battery checks passed at each site
Connectivity	GSM telemetry confirmed; offline buffering enabled
Baseline parameters	pH, TDS and turbidity readings captured at commissioning

Declaration

This sample evidence document is provided for the SIH 2026 demonstration. Its file fingerprint is suitable for recording in the Procurement Audit Ledger; operational source data remains within the authorised portal.
